## Justification for CO-PO mapping

PO1 - Graduate attains highly basic knowledge about newton raphson method Equations, PO2 - Graduate will be able to
CO1 analyze the problems on guassseidal and gauss jacobi equation, PO3 - Graduate will be development of eigen value of power method.
$\mathbf{C O 2}$ polynomials , PO2 - Graduate will be able to analyze a Numerical single integrations using Trapezoidal and Simpson's $1 / 3$ rules. , PO3 - Graduate will be designed and development of newtons interpolation difference.
PO1 - Graduate attains highly basic knowledge about Taylor's series method ,Euler's method, , PO2 - Graduate will be
CO3 able to analyze fourth order runge kutta method , PO3 - Graduate will be able to develop the Finite difference methods for solving second order equations.
CO4 O1 - Graduate will be understanding knowledge on single step method, PO2 - Graduate will be able to analyze the problem by Modified Euler's method, PO3 - Graduate will be development of solutions by multi step metod PO1 - Graduate attains basic knowledge about Finite difference techniques for the solution of two dimensional Laplace's
CO5 and Poisson's equations on rectangular domain, PO2 - Graduate will be able to analyze the problem using one dimensional wave equation, PO3 - Graduate will be develop a formation crank nickelson method
