The 15-day Java class training was a highly effective and comprehensive program designed to equip participants with both foundational and advanced Java programming skills. The structured curriculum, which included detailed explorations of Object-Oriented Programming (OOP) concepts and control statements, ensured that learners could grasp complex topics systematically.

Each day balanced theoretical instruction with hands-on coding sessions, fostering an environment conducive to active learning and practical application. The inclusion of daily tasks and a mini-project not only reinforced the material covered but also provided real-world context, enabling participants to solve practical problems using Java.

The interactive Q&A sessions were particularly beneficial, allowing learners to address their doubts and solidify their understanding. Overall, the training was well-received and left participants feeling confident and proficient in their Java programming abilities.

Exam Structure

The exam had a total of 50 marks, with a pass mark set at 25 marks. The questions were structured as follows:

- **Ten 2-mark Questions:** These questions were designed to test the participants' understanding of basic concepts and their ability to apply these concepts in straightforward scenarios.
- **Four 5-mark Questions:** These questions required more detailed responses, testing participants' in-depth knowledge and their ability to solve more complex problems.
- **Ten 1-mark Questions:** These questions were typically short-answer, assessing quick recall of key facts and concepts.

By attending the Java class, we have gained knowledge about the core-Java and we have skilled with coding techniques.

NX CAD

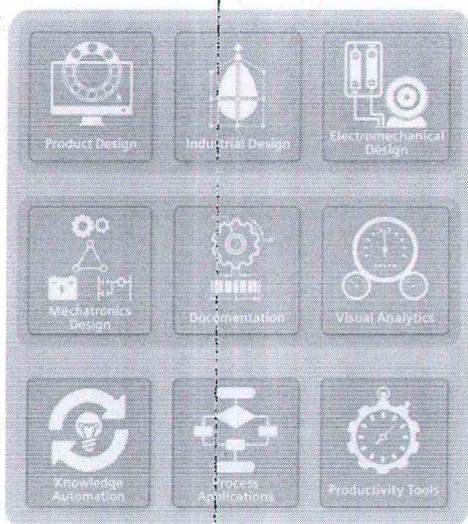

About NX CAD

NX is the next generation design platform that removes barriers to innovation. Seamlessly combining multiple disciplines, NX enables more iterations by both experts and non-experts, and utilizes the latest manufacturing methods to ensure you recognize the value digitalization and deliver the best designs to market faster. You need a single platform that contains all the tools to break down the barriers between disciplines. NX allows all of your engineers and designers to collaborate and share information across the traditional barriers that exist in a single discipline solution. The NX platform allows your enterprise a complete solution that takes advantage of the data without having to re-master the data in another system. NX takes your innovation to the next level by removing barriers.

NX for Digital Product Development

NX CAD

NX accelerates innovation by helping you leverage knowledge, automate processes, evaluate ideas and manage change efficiently.

- A unified, integrated solution built on advanced hybrid CAD tools
- Knowledge driven automation
- Simulation & validation
- Managed development environment

NX for Design is an integrated product design solution that streamlines and accelerates the product development process for engineers who need to deliver innovative products in a collaborative environment.

Unlike CAD-only solutions and closed enterprise solutions, NX for Design offers the highest level of integration between development disciplines in an open, collaborative environment

Industry Applications

In nearly 80% of orders, a leading bearings manufacturing handles customization requests for their bearings. To maintain a competitive edge and continue creating customized pieces, the company needed complete control of the product from design to delivery. They chose NX for CAD, Simcenter (CAE) for performance prediction, NX for CAM and Teamcenter for PLM (product lifecycle management) so that all stakeholders used the same data and workflows to make decisions. Now, NX CAD allows their engineers to design new ideas rapidly and efficiently, while also handling design data coming from customers who use different CAD software. And the associativity between NX applications eliminates errors and ensures all files are up-to-date.
