What is Machine Learning?

- Machine learning is the field of study that focuses on building computer systems that can learn from the data.
- Systems are often called as the model that can learn to perform a specific task by analyzing a lot of examples for a particular problem.
- Example- Machine learning model can learn to recognize an image of a cat by being shown a lots and lots of example and images of the cat.
- No explicit programming
- Model learns with the features that are important in determining whether the picture contains the cat from the data.
- Discovering hidden patterns

Amount and quality of data available for building the model are important factors
